

eIVF Seamless Connectivity

Philips Medical Systems

Simplify Integration

Connect your legacy and custom systems for consistent and accurate information. Speed up decision making processes and assemble your isolated islands of information into a cohesive, value added system.

eIVF-Connect is a core technology that replaces point-to-point interface development with a configurable hub and modern architecture, enabling eIVF to become a common source of critical information.

Based on industry-standard, HIPAA-compliant, HL7 messaging system, eIVF-Connect seamlessly connects you to your labs, analyzers, billing and accounting systems, and other industry standard, HL7 compliant systems.

“What impressed us most about eIVF is its ability to automate and accelerate the flow of information and to integrate our existing systems.”
